	Preface	
	Acknowledgements	
	About the Authors	
	List of Abbreviations	
<b>Chapter 1</b>	<b>Introduction</b>	<b>1</b>
1.1	Historical Development	1
1.2	Three Phases of Prototyping	2
1.3	Fundamentals of Rapid Prototyping	4
1.4	Advantages of Rapid Prototyping	7
1.5	Commonly Used Terms	11
1.6	Classification of Rapid Prototyping	11
	References	13
	Problems	14
<b>Chapter 2</b>	<b>Rapid Prototyping Process</b>	<b>17</b>
2.1	Fundamental Automated Processes	17
2.2	Process Chain	18
2.3	3D Modeling	19
2.4	Data Conversion and Transmission	20
2.5	Checking and Preparing	20
2.6	Building	21
2.7	Postprocessing	22
	References	23
	Problems	24
<b>Chapter 3</b>	<b>Liquid-Based Rapid Prototyping Systems</b>	<b>27</b>
3.1	3D Systems' Stereolithography Apparatus (SLA)	27
3.2	Cubital's Solid Ground Curing (SGC)	36
3.3	Sony's Solid Creation System (SCS)	44
3.4	CMET Solid Object Ultraviolet-laser Plotter (SOUP)	48
3.5	EOS's Stereos Systems	53
3.6	Teijin Seiki's Soliform	59
3.7	Meiko's Rapid Prototyping System for the Jewelry Industry	66
3.8	Other Similar Commercial RP Systems	72
3.9	Two Laser Beams	72
3.10	Microfabrication	74
	References	74
	Problems	77

<b>Chapter 4</b>	<b>Solid-Based Rapid Prototyping Systems</b>	<b>79</b>
4.1	Helisys' Laminated Object Manufacturing (LOM)	79
4.2	Stratasys' Fused Deposition Modeling (FDM)	92
4.3	KIRA's Selective Adhesive and Hot Press (SAHP)	97
4.4	Kinergy's Rapid Prototyping System	102
4.5	3D Systems' Multi-Jet Modeling System (MJM)	105
4.6	IBM's Rapid Prototyping System (RPS)	109
4.7	Sanders Prototype Inc.'s Model Maker MM-6B	111
4.8	Sparx AB's Hot Plot	112
4.9	Scale Models Unlimited's LaserCMM	113
	References	113
	Problems	115
<b>Chapter 5</b>	<b>Powder-Based Rapid Prototyping Systems</b>	<b>117</b>
5.1	DTM's Selective Laser Sintering (SLS)	117
5.2	Soligen's Direct Shell Production Casting (DSPC)	126
5.3	Fraunhofer's Multi-phase Jet Solidification (MJS)	131
5.4	EOS's EOSINT Systems	134
5.5	BPM Technology's Ballistic Particle Manufacturing (BPM)	139
5.6	MIT's 3D Printing (3DP)	144
	References	147
	Problems	149
<b>Chapter 6</b>	<b>Rapid Prototyping Data Formats</b>	<b>151</b>
6.1	STL Format	151
6.2	STL File Problems	152
6.3	Consequences of Building a Valid and Invalid Tessellated Model	156
6.4	STL File Repair	158
6.5	Other Translators	184
6.6	Newly Proposed Formats	185
	References	197
	Problems	198
<b>Chapter 7</b>	<b>Applications in Manufacturing &amp; Case Studies</b>	<b>201</b>
7.1	Application-Material Relationship	201
7.2	Finishing Processes	203
7.3	Applications in Design	204
7.4	Applications in Engineering, Analysis and Planning	205
7.5	Applications in Manufacturing and Tooling	208
7.6	Aerospace Industry	214
7.7	Automotive Industry	218

7.8	Biomedical Industry
7.9	Jewelry Industry
7.10	Coin Industry
7.11	Tableware Industry
	References
	Problems

<b>Chapter 8</b>	<b>Evaluation and Benchmarking</b>
8.1	Using Bureau Services
8.2	Setting Up a Service Bureau
8.3	Expert System for Selection of
8.4	Technical Evaluation Through
8.5	Growth
8.6	Further Development Trends
	References
	Problems

<b>Appendix A</b>	<b>List of CAD to STL Interfaces</b>
-------------------	--------------------------------------

<b>Appendix B</b>	<b>List of RP Case Studies</b>
-------------------	--------------------------------

**CD-ROM Attachment**

7.8	Biomedical Industry	221
7.9	Jewelry Industry	224
7.10	Coin Industry	225
7.11	Tableware Industry	227
	References	230
	Problems	232
<b>Chapter 8</b>	<b>Evaluation and Benchmarking</b>	<b>235</b>
8.1	Using Bureau Services	235
8.2	Setting Up a Service Bureau	236
8.3	Expert System for Selection of RP Systems	250
8.4	Technical Evaluation Through Benchmarking	257
8.5	Growth	270
8.6	Further Development Trends	270
	References	274
	Problems	275
<b>Appendix A</b>	<b>List of CAD to STL Interfaces July 1990</b>	<b>277</b>
<b>Appendix B</b>	<b>List of RP Case Studies</b>	<b>281</b>
<b>CD-ROM Attachment</b>		<b>289</b>
